I. TECHNICAL DATA

1. MODEL AT-2200

FM TUNER SECTION

FREQUENCY RANGE	88 MHz to 108 MHz
SENSITIVITY (IHF)	1.9 μ V
CAPTURE RATIO	1.3 dB
SELECTIVITY (IHF)	More than 60 dB
IMAGE REJECTION	More than 55 dB (98 MHz)
IF REJECTION	More than 85 dB (98 MHz)
SPURIOUS REJECTION	More than 85 dB (98 MHz)
AM SUPPRESSION	50 dB
SIGNAL TO NOISE RATIO	70 dB
HARMONIC DISTORTION MONO	Less than 0.3% (100% modulation)
STEREO	Less than 0.5% (100% modulation)
TUNING INDICATOR	Signal Strength Meter and Center Tuning Meter
MUTING	ON-OFF
STEREO SEPARATION	More than 40 dB (1 kHz)
SUB CARRIER SUPPRESSION	More than 50 dB
OUTPUT VOLTAGE	Variable from 0 to 1,000 mV (100% modulation)
ANTENNA INPUT IMPEDANCE	300 ohms balanced, 75 ohms unbalanced

AM TUNER SECTION

FREQUENCY RANGE	520 kHz to 1,605 kHz
SENSITIVITY (IHF)	180 μ V/m (bar antenna), 17 μ V (external antenna)
SELECTIVITY (IHF)	More than 30 dB
IMAGE REJECTION	More than 55 dB (1,000 kHz)
IF REJECTION	More than 45 dB
SIGNAL TO NOISE RATIO	More than 45 dB
OUTPUT VOLTAGE	Variable from 0 to 350 mV (30% modulation)
ANTENNA	Built-in ferrite bar antenna

MISCELLANEOUS

SEMI-CONDUCTORS	Transistors: 5, Diodes: 7, FETs: 1, ICs: 3
POWER REQUIREMENTS	CSA, UL and LA models: 120V, 60 Hz CEE models: 220V, 60 Hz Other models: 110/220/240V, 50/60 Hz Switchable
DIMENSIONS	380(W) x 125(H) x 263(D)mm (15x4.9x10.3) inches
WEIGHT	4.2 kg (9.2 lbs)

* For improvement purposes, specifications and design are subject to change without notice.

2. MODEL AT-2200L

FM TUNER SECTION

FREQUENCY RANGE	88 MHz to 108 MHz
SENSITIVITY (IHF)	1.9 μ V
CAPTURE RATIO	1.3 dB
SELECTIVITY (IHF)	More than 60 dB
IMAGE REJECTION	More than 55 dB (98 MHz)
IF REJECTION	More than 85 dB (98 MHz)
SPURIOUS REJECTION	More than 85 dB (98 MHz)
AM SUPPRESSION	50 dB
SIGNAL TO NOISE RATIO	70 dB
HARMONIC DISTORTION MONO	Less than 0.3% (100% modulation)
STEREO	Less than 0.5% (100% modulation)
TUNING INDICATOR	Center Tuning Meter and Signal Strength Meter
MUTING	ON-OFF
STEREO SEPARATION	More than 40 dB (1 kHz)
SUBCARRIER SUPPRESSION	More than 50 dB
OUTPUT VOLTAGE	Variable from 0 to 1V (100% modulation)
ANTENNA INPUT IMPEDANCE	300 ohms balanced, 75 ohms unbalanced

AM TUNER SECTION

Medium Wave Band

FREQUENCY RANGE	520 kHz to 1,605 kHz
SENSITIVITY (IHF)	180 μ V/m (bar antenna) 20 μ V (ext. antenna)
SELECTIVITY (IHF)	More than 30 dB
IMAGE REJECTION	Moore than 45 dB (1 MHz)
IF REJECTION	More than 50 dB
SIGNAL TO NOISE RATIO	More than 50 dB
OUTPUT VOLTAGE	Variable from 0 to 350 mV (30% modulation)

Long Wave Band

FREQUENCY RANGE	150 kHz to 350 kHz
SENSITIVITY (IHF)	300 μ V/m (bar antenna), 30 μ V (ext. antenna)
SELECTIVITY (IHF)	More than 30 dB
IMAGE REJECTION	More than 30 dB (240 kHz)
IF REJECTION	More than 50 dB
SIGNAL TO NOISE RATIO	More than 42 dB
OUTPUT VOLTAGE	Variable from 0 to 350 mV (30% modulation)

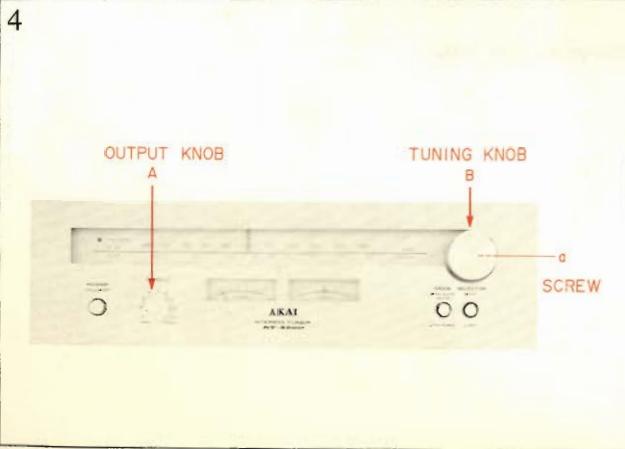

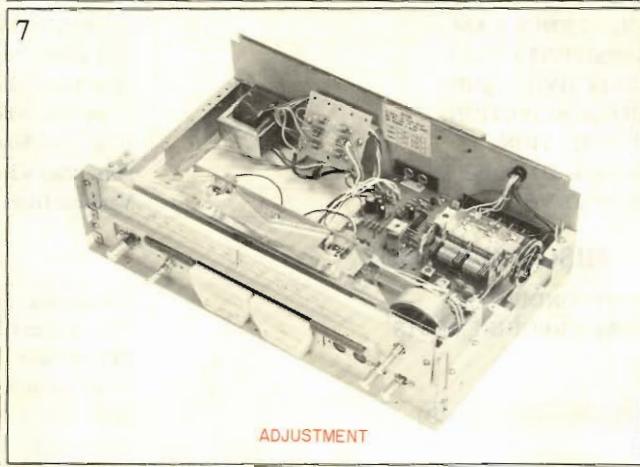

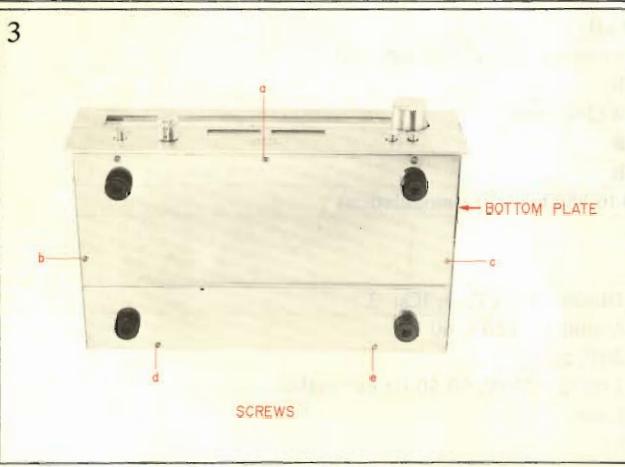

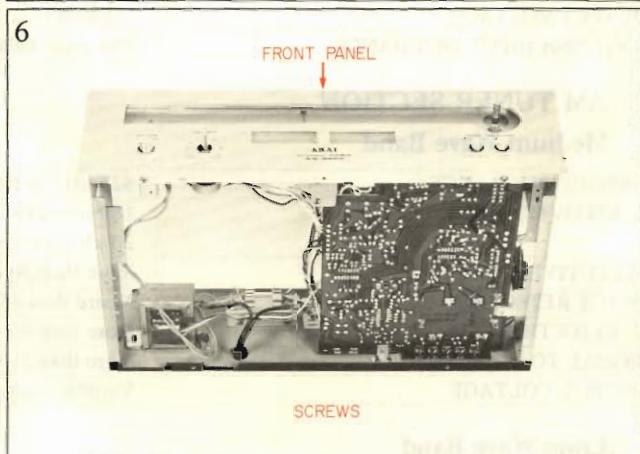

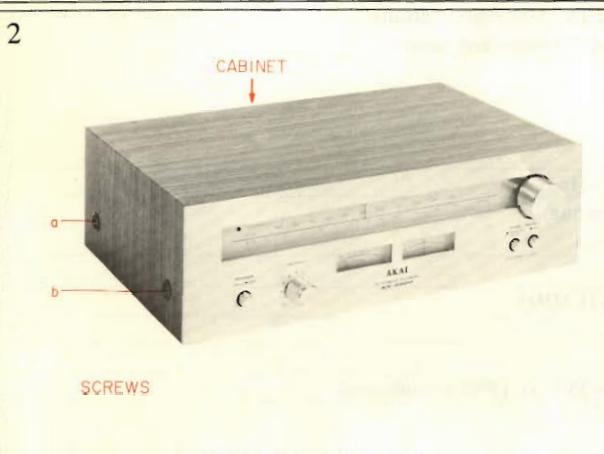

MISCELLANEOUS

SEMI-CONDUCTORS	Transistors: 5, Diodes: 7, FET: 1, ICs: 3
POWER REQUIREMENTS	CSA, UL and LA models: 120V, 60 Hz CEE models: 220V, 50 Hz Other models: 110/220/240V, 50/60 Hz switchable
DIMENSIONS (WxHxD)	380 x 125 x 265 mm (15.0 x 4.9 x 10.4")
WEIGHT	4.2 kg (9.3 lbs)

* For improvement purposes, specifications and design are subject to change without notice.

II. DISMANTLING OF UNIT

In case of trouble, etc. necessitating disassembly, please disassemble in the order shown in photographs. Reassemble in reverse order.

III. CONTROLS

1. MODEL AT-2200

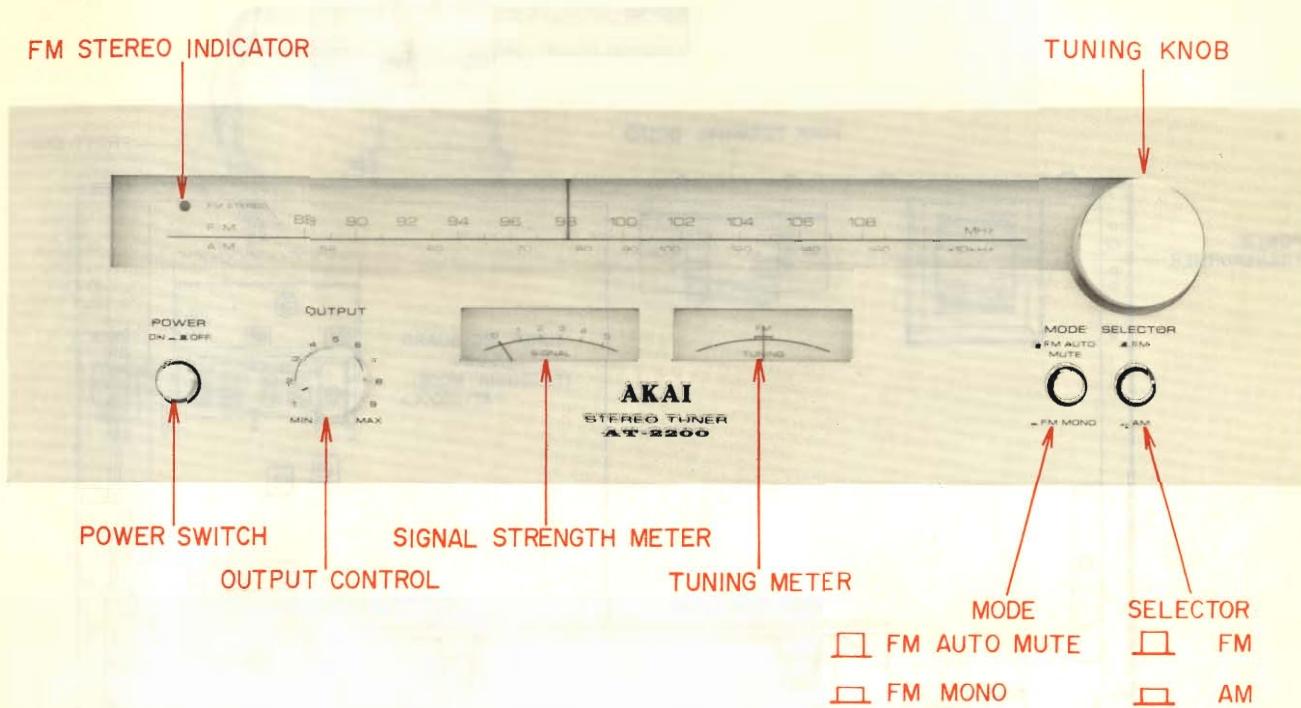

Fig. 1 Controls

2. MODEL AT-2200L

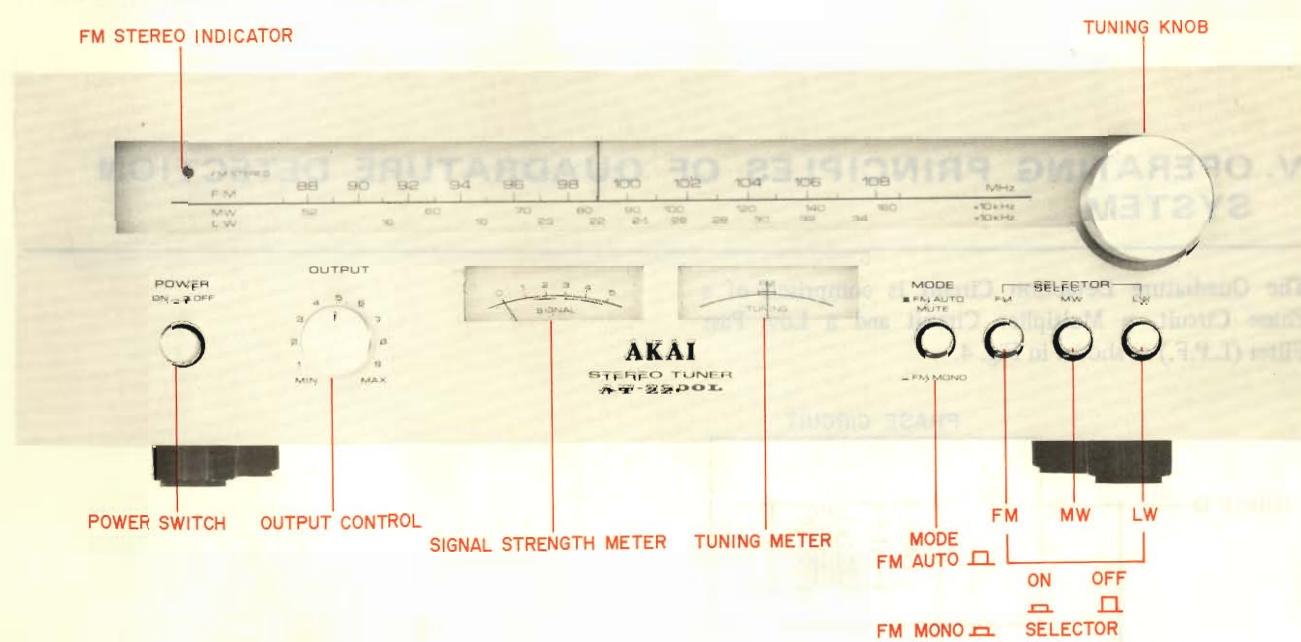

Fig. 2 Controls

IV. PRINCIPAL PARTS LOCATION

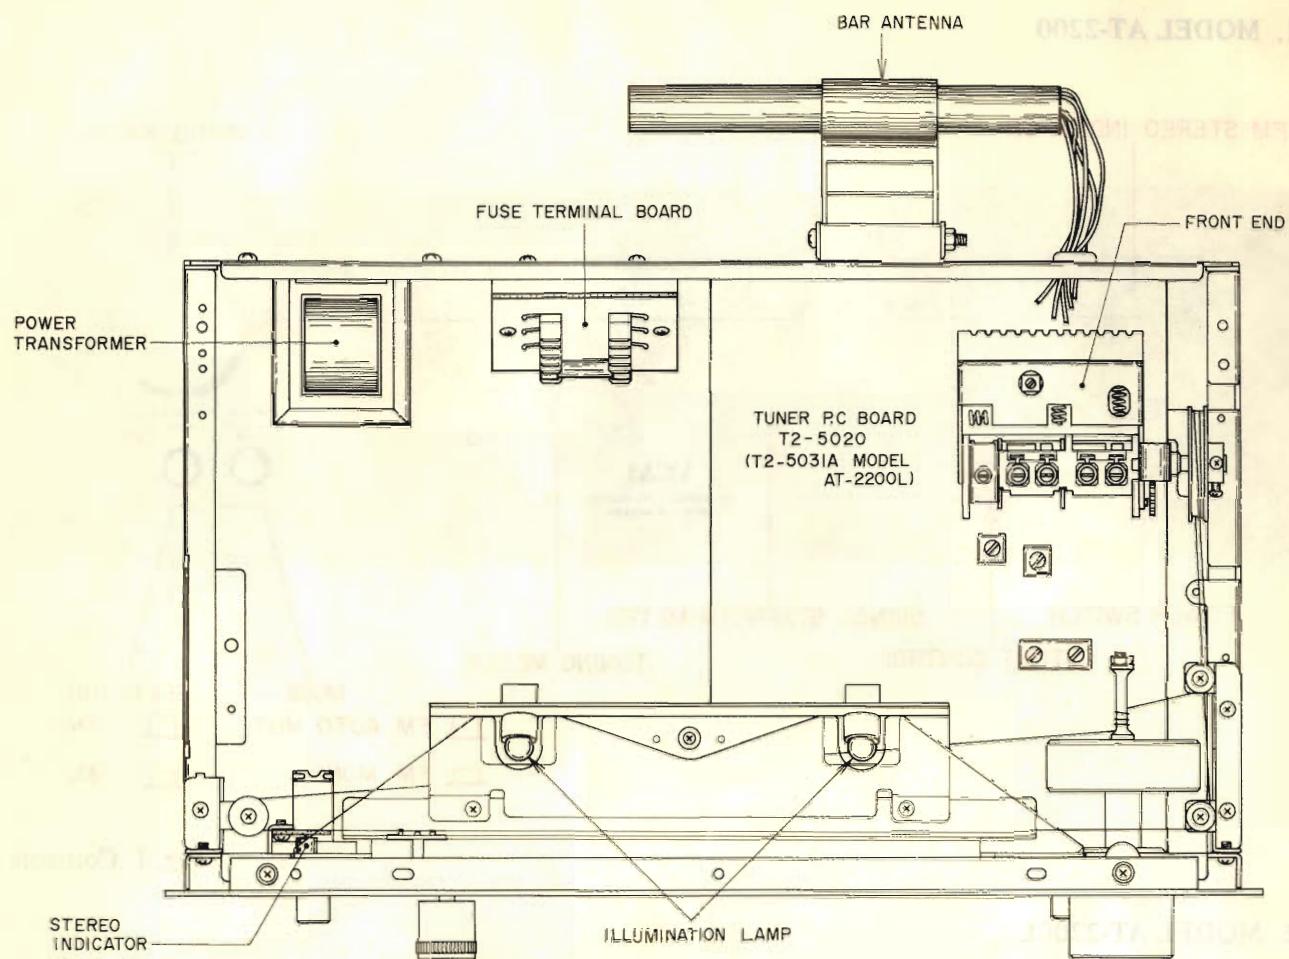

Fig. 3 Principal Parts Location

V. OPERATING PRINCIPLES OF QUADRATURE DETECTION SYSTEM

The Quadrature Detection Circuit is comprised of a Phase Circuit, a Multiplier Circuit and a Low Pass Filter (L.P.F.) as shown in Fig. 4.

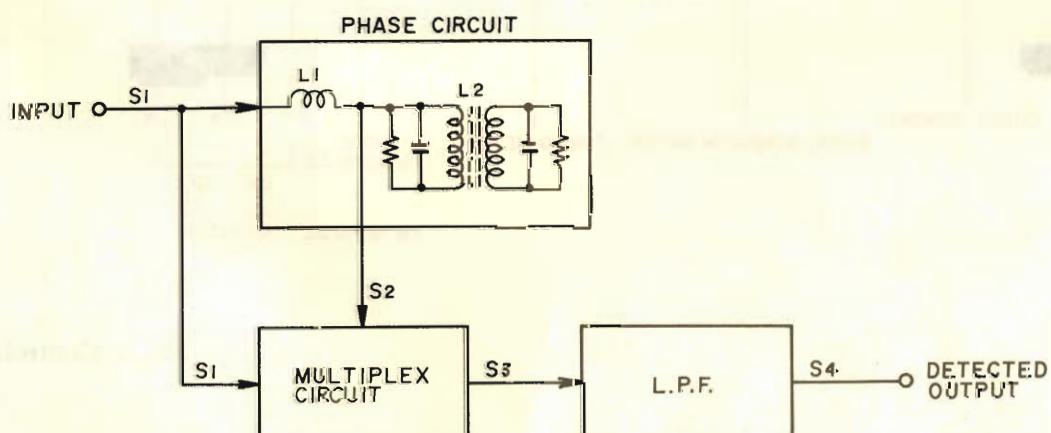

Fig. 4 Quadrature Detection Block Diagram

These are two types of Phase Circuits, the Single tuning type shown in Fig. 5 and the Double tuning type shown in Fig. 6. However, because with the double tuning type there is less frequency deviation in relation to carrier frequency, linearity is improved as shown in Fig. 7, and phase distortion is reduced, this type phase circuit is employed in the AT-2200 and AT-2200L.

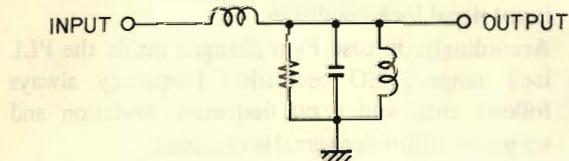

Fig. 5 Single Tuning Type

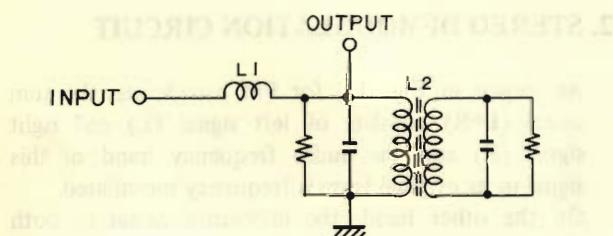

Fig. 6 Double Tuning Type

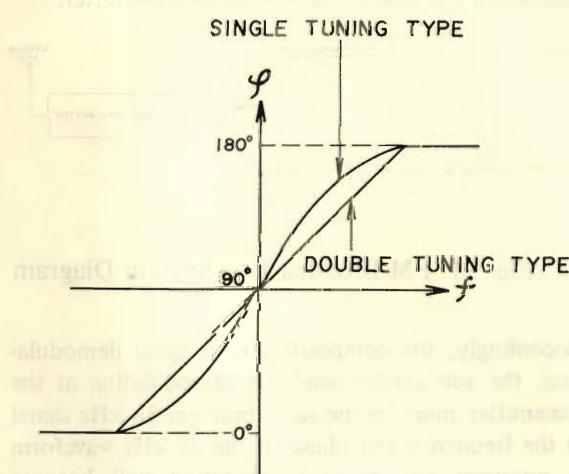

Fig. 7 Tuning Curve

Input signal S1 is divided into the part which enters the direct multiplier circuit and the part which passes the phase circuit and enters the multiplier circuit. The signal supplied to the phase circuit is always 90° phase delayed at L1. Also because at Non-modulation time, L2 is tuned to 10.7 MHz, if modulation is applied and S1 is changed from 10.7 MHz, phase deviation at L2 will take place proportionately in relation to this changed part and this becomes S2 signal which is delayed in relation to S1.

At Non-modulation, because as shown in Fig. 8, input signal S1 and 90° phase delayed (by means of L1) signal S2 are switched by means of the multiplier circuit, the output signal becomes S3. Because this S3 passes the low pass filter and becomes S4 fixed direct current, the detector output is zero.

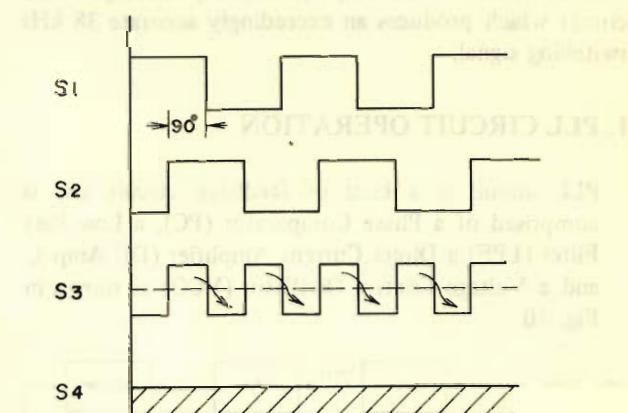

Fig. 8 Output at Non-modulation

Then, when modulation is applied, because the switched output is varied according to the degree of modulation, and the output which passed the low pass filter becomes the pulsating current part as shown in Fig. 9, detector output is obtained.

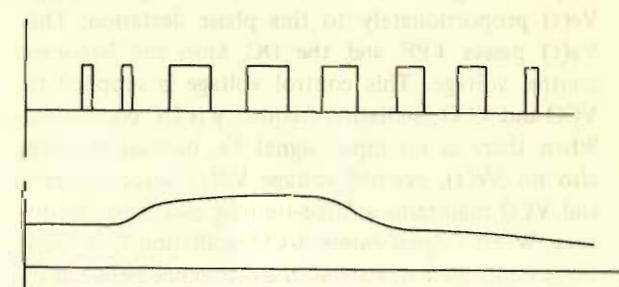

Fig. 9 Output at Modulation Time

VI. OPERATING PRINCIPLES OF PLL CIRCUIT EMPLOYED IN FM STEREO DEMODULATION CIRCUIT

To separate FM stereo broadcast signal received to date into left and right signals, a 19 kHz pilot signal was successively multiplier to form a 38 kHz signal and stereo separation was effected from this. However, with this multiplier system, change in coils due to wear occurred and adjustment points were numerous, etc. Therefore, this model employs a newly developed PLL circuit which produces an exceedingly accurate 38 kHz switching signal.

1. PLL CIRCUIT OPERATION

PLL circuit is a kind of feedback circuit and is comprised of a Phase Comparator (PC), a Low Pass Filter (LPF) a Direct Current Amplifier (DC Amp.), and a Voltage Control Oscillator (VCO) as shown in Fig. 10.

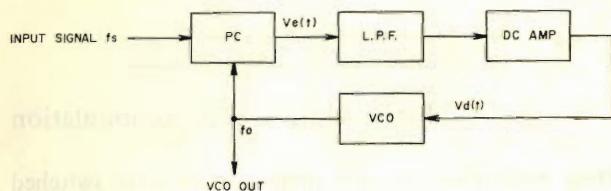

Fig. 10 PLL Circuit

The PC compared input signal F_s and VCO oscillator output and generates the difference in signal voltage $V_e(t)$ proportionately to this phase deviation. This $V_e(t)$ passes LPF and the DC Amp and becomes control voltage. This control voltage is supplied to VCO and VCO oscillation frequency is DC controlled. When there is no input signal F_s , because there is also no $V_e(t)$, control voltage $V_d(t)$ becomes zero, and VCO maintains a *free-running oscillation frequency. When a signal enters, VCO oscillation frequency F_o is controlled to narrow the difference between F_s by means of feedback as described above, and the PLL circuit assumes a synchronous condition. This is referred to as input signal lock. (In case the difference between F_o and F_s is too large, the differential signal frequency becomes high and is reduced at the LPF. However, because the VCO control voltage does not change, PLL will not stay within the *lock range). Because of the ability of the signal interference removing LPF to accumulate the previous voltage in case the PLL deviates from within the lock range due to certain interference, the original condition is quickly reinstated.

* Free running frequency:

Oscillating frequency when there is no input signal.

* Lock range:

At the condition in which the VCO oscillation frequency is locked to the input signal, the lock range is the oscillating frequency in which when the input signal changes, the PLL maintains its input signal lock condition.

Accordingly, in case F_s is changed inside the PLL lock range, VCO oscillation frequency always follows this, and a no frequency deviation and no phase difference signal is obtained.

In other words, VCO oscillation frequency can be locked to F_s .

2. STEREO DEMODULATION CIRCUIT

As shown in Fig. 11, for FM broadcasts, the sum signal ($L+R$) consists of left signal (L) and right signal (R) and the audio frequency band of this signal in its original form is frequency modulated.

On the other hand, the difference signal of both ($L-R$) is changed to high frequency through the use of the sub carrier, and is referred to as the sub channel signal. The carrier is further frequency modulated and sent to the FM stereo transmitter.

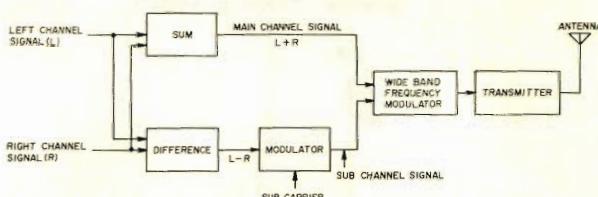

Fig. 11 FM Broadcasting System Diagram

Accordingly, for composite stereo signal demodulation, the sub carrier used for demodulation at the transmitter must be the same uniform 38 kHz signal as the frequency and phase. If the 38 kHz waveform is asymmetrical, channel separation will become poor. At the PLL employed MPX stereo demodulator circuit, as shown in Fig. 10, first a 76 kHz signal is oscillated and when this passes the divider, a symmetrical 38 kHz signal is obtained.

This 38 kHz sub carrier is supplied to the multiplex decoder together with the sub channel of the composite stereo signal. At the multiplex decoder, left and right channel audio signals are separated in order as shown in Fig. 13.

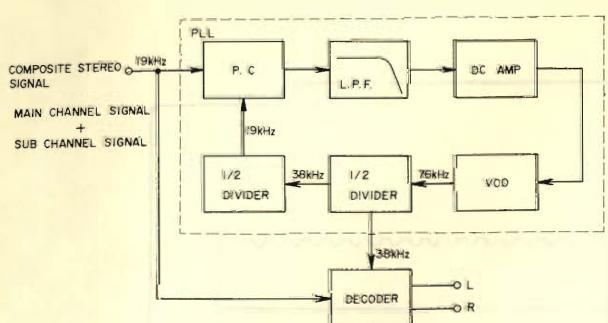

Fig. 12 MPX IC Function

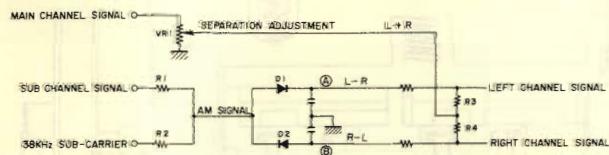

Fig. 13 Multiplex Decoder

The 38 kHz sub carrier composited with the sub channel signal of which the carrier part was removed when sub channel signal and sub carrier passed R1 R2 produces the regular AM wave. Then, because this envelop is detected by mutually reverse polarity connected diodes D1 and D2, L-R signal is emitted at point (A) and R-L signal at point (B).

Also, because main channel signal (L+R) is supplied to R3, R4 center point, (A)(B) point voltage is added and subtracted and becomes

$$(L+R) + (L-R) = 2L \text{ (left channel)}$$

$$(L+R) - (L-R) = 2R \text{ (right channel)}$$

The level of the main channel signal (L+R) can be adjusted by means of variable resistor VR(VR1) for optimum separation.

Thus, the function of actually employed PLL IC LA-3350 is shown in Fig. 14.

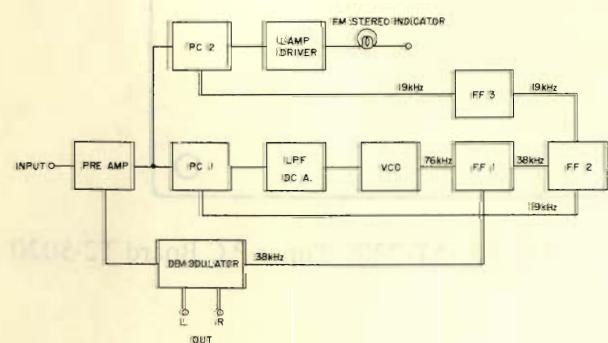

Fig. 14 LA-3350 Function System Diagram

VII. TUNER SECTION ADJUSTMENT

1. MODEL AT-2200

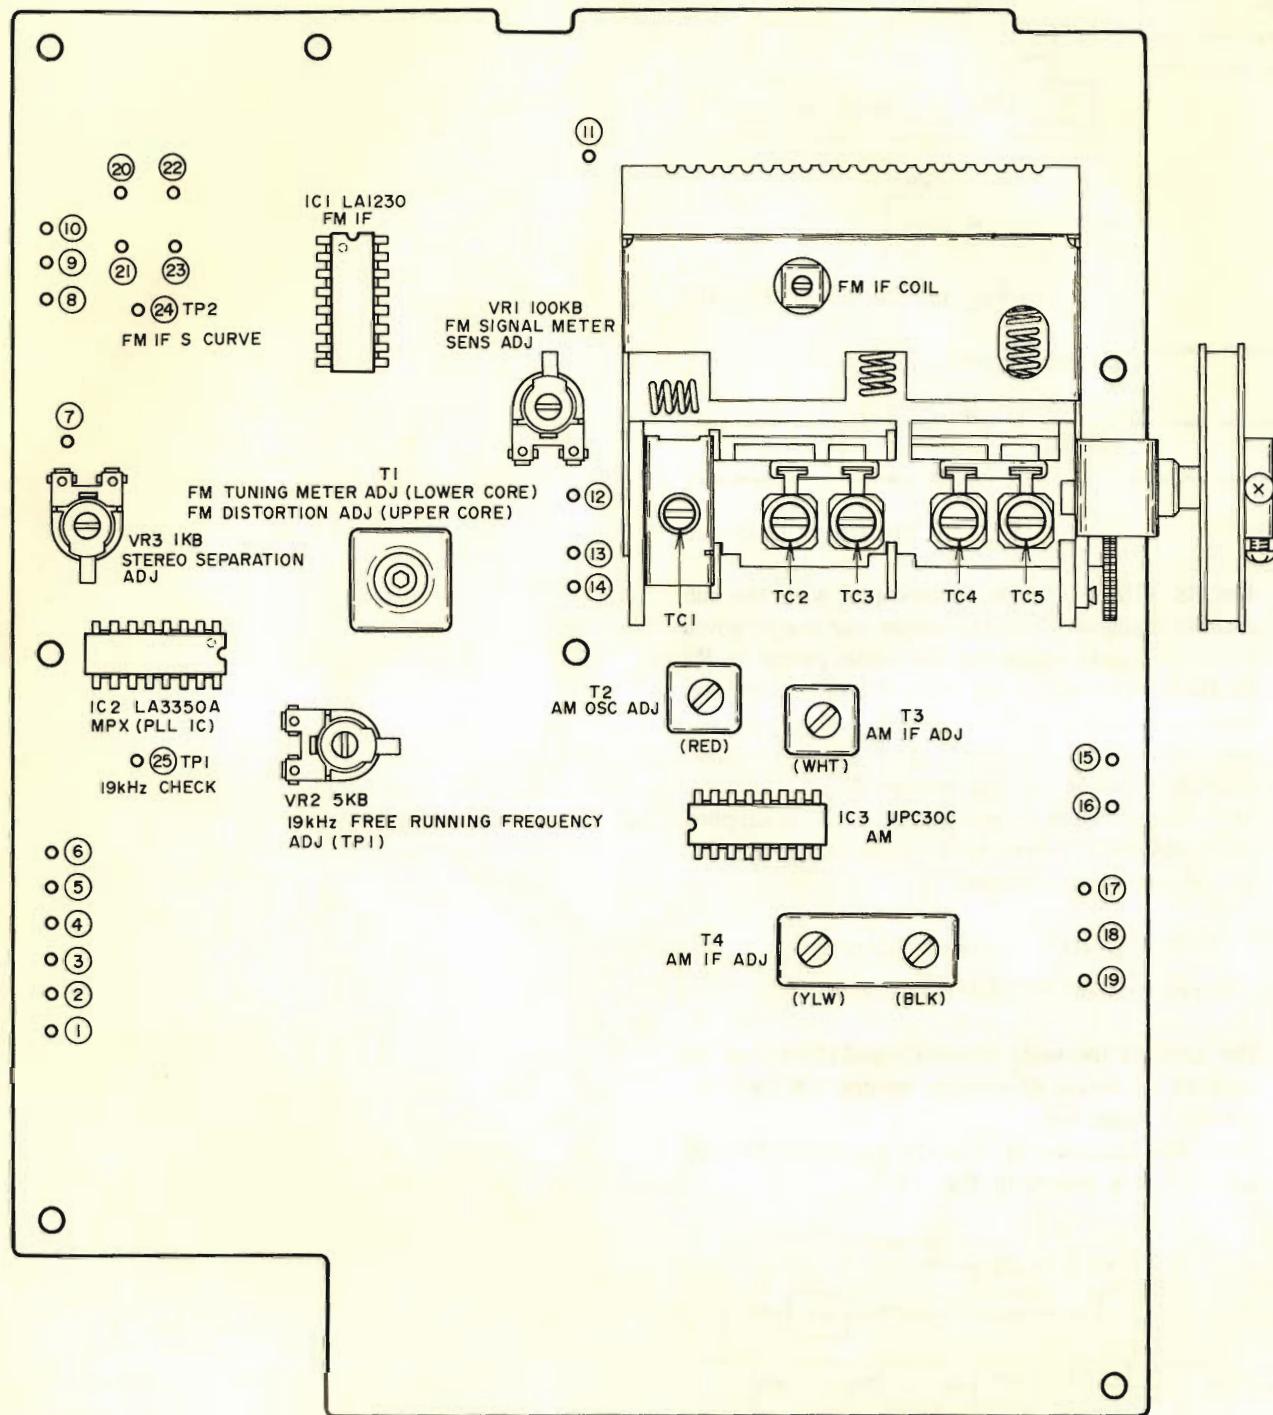

Fig. 15 AT-2200 Tuner P.C Board T2-5020

1) FM Section Adjustment (Refer to Fig. 15)

Step	Adjustment Item	Adjustment Part	Result	Remarks
1	Front End IF Coil	IF Coil (Front End)	Maximum Noise level	Set Selector to FM. Set FM Mute to OFF. Tune only noise without interference of broadcasting
2	Tuning Meter Centering	T1 Lower Side Core (Tuner P.C Board T2-5020)	Center indication of Tuning Meter	(Same as above)
3	Distortion	T1 Upper Side Core (Tuner P.C Board T2-5020)	Less than 0.3% distortion	108 MHz, 60 dB (mono) input. Less than 0.3% distortion both channels.
4	Confirmation of Tuning Meter indication			If Tuning Meter indication is not at center position readjust Steps 2,3 above.
5	Frequency Coverage	TC1 Trimmer Condenser (Front End)		108 MHz, 60 dB (mono) input Error: Within ± 250 kHz
6	Sensitivity	TC3, TC5 Trimmer Condensers (Front End)	Distortion less than 3.0%	108 MHz, Less than 12 dB (mono) input
7	Confirmation of low range sensitivity		Distortion less than 3.0%	88 MHz, Less than 12 dB (mono) input Error: Within ± 250 kHz (See Note 1)
8	Confirmation of midrange sensitivity		Distortion less than 3.0%	98 MHz, Less than 12 dB (mono) input (See Note 1)
9	PLL IC Free Running Frequency	VR2 5 kB (Tuner P.C Board T2-5020)	19.00 kHz	Connect frequency counter to TP-1. Set Mute Switch to ON. (See Note 2)
10	Stereo Indicator Lamp Confirmation			98 MHz, 60 dB (stereo) input. If stereo indicator lamp fails to light, this means that stereo broadcasts are not being received (stereo separation not attained).
11	Left Stereo Separation	VR3 1 kB (Tuner P.C Board T2-5020)	More than 40 dB	98 MHz, 60 dB (stereo) L-CH input. Distortion less than 0.5%
12	Right Stereo Separation Confirmation		More than 40 dB	98 MHz, 60 dB (stereo) R-CH input. Distortion less than 0.5% (See Note 3)
13	Signal Meter Sensitivity	VR1 100 kB (Tuner P.C Board T2-5020)	Indicator at "5"	98 MHz, 100 dB (mono) input.

Chart-1

- Note 1. In the event that distortion factors in Steps 7 and 8 are not less than 3%, readjust Front End Trimmer Condensers TC3 and TC5 to obtain a minimum average distortion factor at 88, 98, and 108 MHz (same distortion factor at all three points).
- Note 2. PLL IC free running frequency must be an exact 19.00 kHz.
- Note 3. In the event that distortion factors in Steps 11 and 12 are not less than 0.5%, adjust by turning IF Coil in Step 1 within 1/2 turn.

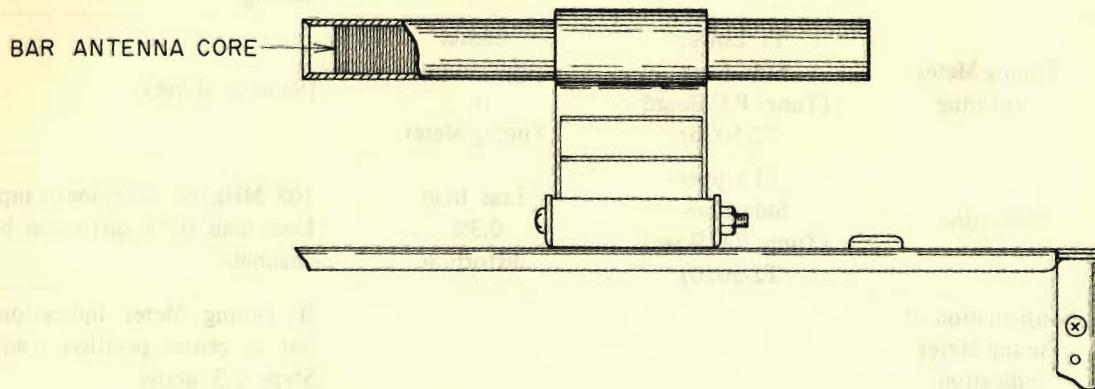

Fig. 16 Bar Antenna

2) AM Section Adjustment (Refer to Fig. 15 and Fig. 16)

Step	Adjustment Item	Adjustment Part	Result	Remarks
1	Low range frequency Coverage	T2 (RED)(Tuner P.C Board T2-5020)	Error: Within 2%	Set Selector to AM. 520 kHz optional input.
2	Low range sensitivity	Bar Antenna core, T4 (YLW,BLK) T3 (WHT)(Tuner P.C Board T2-5020)	Maximum Sensitivity	520 kHz optional input.
3	High range frequency Coverage	TC2 Trimmer Condenser (Front End)	Error: Within 2%	1,400 kHz optional input.
4	High range sensitivity	TC4 Trimmer Condenser (Front End)	Maximum Sensitivity	1,400 kHz optional input.
5	Scale and sensitivity Confirmation			Repeat Steps 1 through 4 two or three times.

Chart-2

2. MODEL AT-2200L

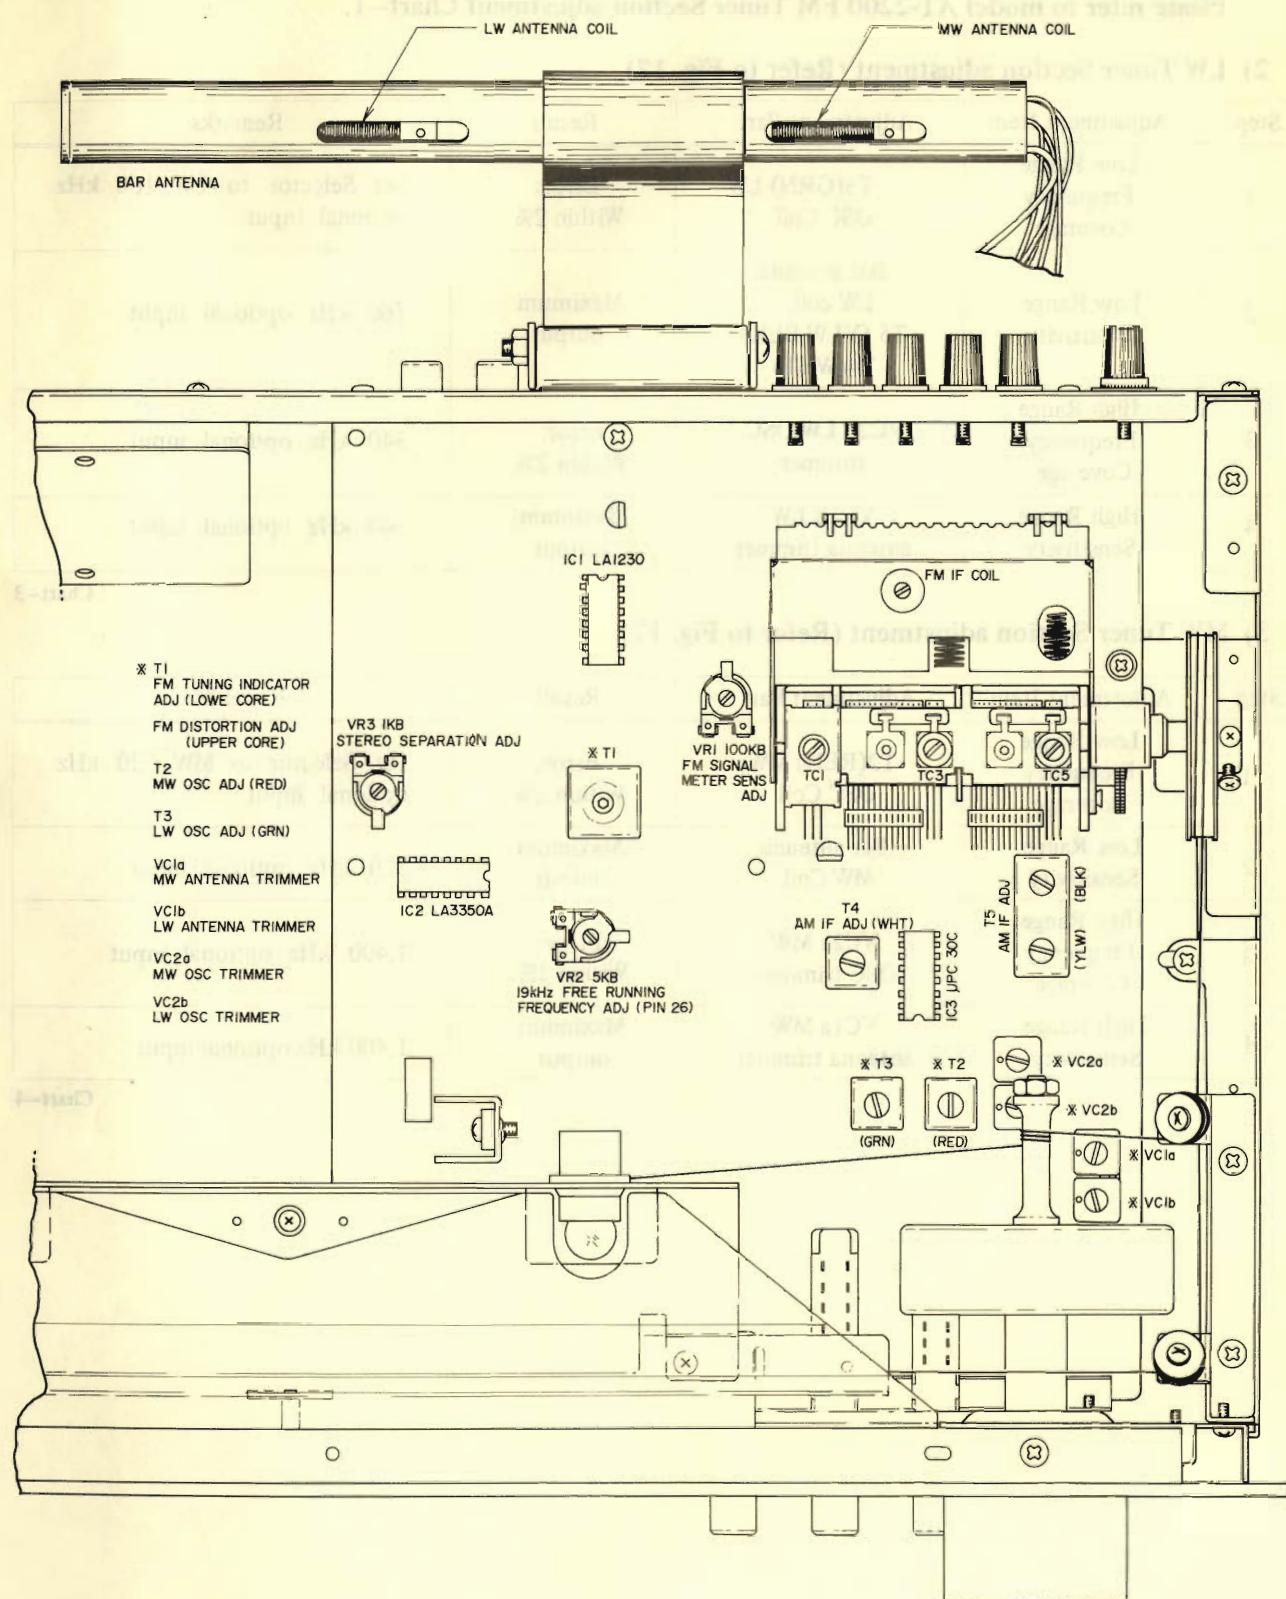

Fig. 17 AT-2200L Tuner P.C Board T2-5031A

1) FM Tuner Section adjustment (Refer to Fig. 17)

Please refer to model AT-2200 FM Tuner Section adjustment Chart-1.

2) LW Tuner Section adjustment (Refer to Fig. 17)

Step	Adjustment Item	Adjustment Part	Result	Remarks
1	Low Range Frequency Coverage	T3(GRN) LW OSC Coil	Error: Within 2%	Set Selector to LW 160 kHz optional input
2	Low Range Sensitivity	Bar antenna LW coil. T5 (YLW,BLK) T4(WHT)	Maximum output	160 kHz optional input
3	High Range Frequency Coverage	VC2b LW OSC trimmer	Error: Within 2%	340 kHz optional input
4	High Range Sensitivity	VC1b LW antenna trimmer	Maximum output	340 kHz optional input

Chart-3

3) MW Tuner Section adjustment (Refer to Fig. 17)

Step	Adjustment Item	Adjustment Part	Result	Remarks
1	Low Range Frequency Coverage	T2(RED) MW OSC Coil	Error: Within 2%	Set Selector to MW 520 kHz optional input
2	Low Range Sensitivity	Bar antenna MW Coil	Maximum output	520 kHz optional input
3	High Range Frequency Coverage	VC2a MW OSC trimmer	Error: Within 2%	1,400 kHz optional input
4	High Range Sensitivity	VC1a MW antenna trimmer	Maximum output	1,400 kHz optional input

SECTION 2

PARTS LIST

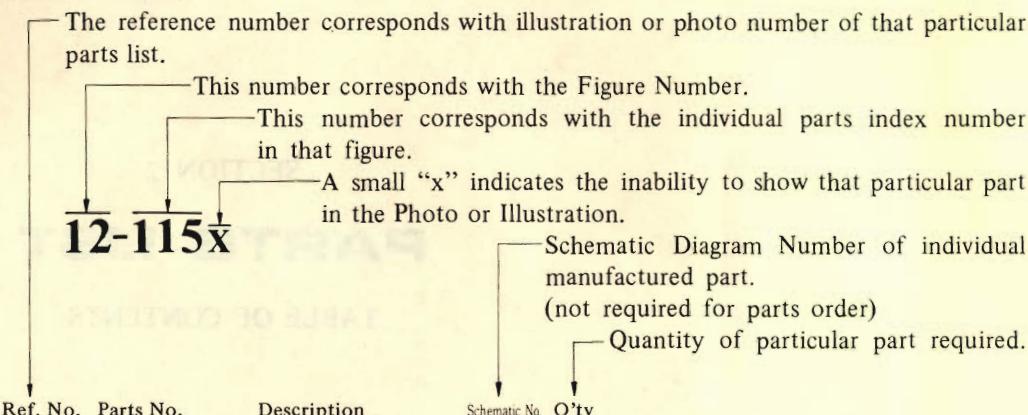

TABLE OF CONTENTS

1. RECOMMENDED SPARE PARTS LIST	25
2. TUNER P.C BOARD (T2-5020) (T2-5031A) BLOCK	26
3. ASSEMBLY BLOCK	27
4. FINAL ASSEMBLY BLOCK	29
5. LIST OF INTERCHANGEABLE SEMICONDUCTORS	30
INDEX	31

Resister and Capacitor which is not listed in this parts list, please refer to
COMMON LIST FOR SERVICE PARTS.

HOW TO USE THIS PARTS LIST

1. This parts list is compiled by various individual blocks based on assembly process.
2. When ordering parts, please describe parts number, serial number, and model number in detail.
3. How to read list.

Ref. No.	Parts No.	Description	Schematic No.	Q'ty
FLYWHEEL BLOCK #13				
12-115x	800425	Flywheel Block Assy. Comp.	RDG ±13	1
12-116	244506	Flywheel Only	RD-233	1
12-117x	244754	Felt, Flywheel	RD-275	1
12-118	251324	Main Metal Case	RD-236	1
12-119	253080	Main Metal	RD-237	1

4. The symbol numbers shown on the P.C. Board list can be matched with the Composite Views of components of the Schematic Diagram or Service Manual.
5. The indications of Resistors and Capacitors in the photos of P.C. Board are being eliminated.
6. The shape of the parts and parts name, etc. can be confirmed by comparing them with the parts shown on the Electrical Parts Table of P.C. Board.
7. Both the kind of part and installation position can be determined by the Parts Number. To determine where a parts number is listed, utilize Parts Index at end of Parts List.
It is necessary first of all to find the Parts Number. This can be accomplished by using the Reference Number listed at right of parts number in the Parts Index. (meaning of ref. no. outlined in Item 3 above).
8. Utilize separate "Price List for Parts" to determine unit price. The most simple method of finding parts Price is to utilize the reference number.

CAUTION:

1. When placing an order for parts, be sure to list the parts no., model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.

I. RECOMMENDED SPARE PARTS LIST

Parts No.	Parts Nomenclature	Reference No.
BA211184	Tuner P.C Board Comp. T2-5020	
BC224820	Cabinet B M2-5013
