

# ST-5066

USA, Canada, AEP  
and UK Model

## FM STEREO / FM-AM TUNER

### SPECIFICATIONS

#### FM TUNER SECTION

Tuning range: 87.5 MHz to 108 MHz

Antenna: 300 ohms balanced  
75 ohms unbalanced

Usable sensitivity: 2.2  $\mu$ V (IHF)  
1.7  $\mu$ V (S/N = 30 dB)

S/N ratio: 68 dB

Frequency response: 30 Hz to 15 kHz  $\pm$ 3 dB

Harmonic distortion: Mono : 0.5% at 400 Hz 75 kHz  
deviation (100%) Mod.  
Stereo : 0.8% at 400 Hz 75 kHz  
deviation (100%) Mod.

Fm stereo separation: Greater than 35 dB at 400 Hz

#### A-M TUNER SECTION

Tuning range: 530 kHz to 1,605 kHz

Antenna: Built-in bar antenna with external  
antenna provision

Sensitivity: 48 dB/m, built-in antenna  
100  $\mu$ V, external antenna

S/N ratio: 50 dB at 50 mV/m

Harmonic distortion: 0.6 %

#### GENERAL

Power requirements: 120 volts, 60 Hz ac  
(USA and Canada Model)  
110, 127, 220, 240 volts, 50/60 Hz ac  
(AEP and UK Model)

Power consumption: 23 watts

Dimensions: 410 (w) x 120 (h) x 284 (d) mm  
16 $\frac{1}{8}$  (w) x 4 $\frac{1}{16}$  (h) x 11 $\frac{3}{16}$  (d) inches

Net weight: 4.8 kg (10 lb 9 oz)

## SECTION 1

### TECHNICAL DESCRIPTION

#### 1-1. SPECIFICATIONS

##### Fm Tuner Section

Tuning range:	87.5 to 108 MHz
Antenna:	300 ohms balanced 75 ohms unbalanced
Intermediate frequency:	10.7 MHz
Usable sensitivity:	2.2 $\mu$ V (IHF) 1.7 $\mu$ V ( $S/N = 30$ dB)
S/N ratio:	68 dB
Capture ratio:	1.5 dB
Selectivity:	55 dB
Image rejection:	45 dB
I-f rejection:	95 dB
Spurious rejection:	75 dB
A-m suppression:	45 dB
Frequency response:	30 Hz to 15 kHz $\pm \frac{1}{3}$ dB
Harmonic distortion:	Mono: 0.5 % at 400 Hz 75 kHz deviation (100 %) Mod. Stereo: 0.8 % at 400 Hz 75 kHz deviation (100 %) Mod.
Fm stereo separation:	Greater than 35 dB at 400 Hz
19 kHz, 38 kHz suppression:	40 dB

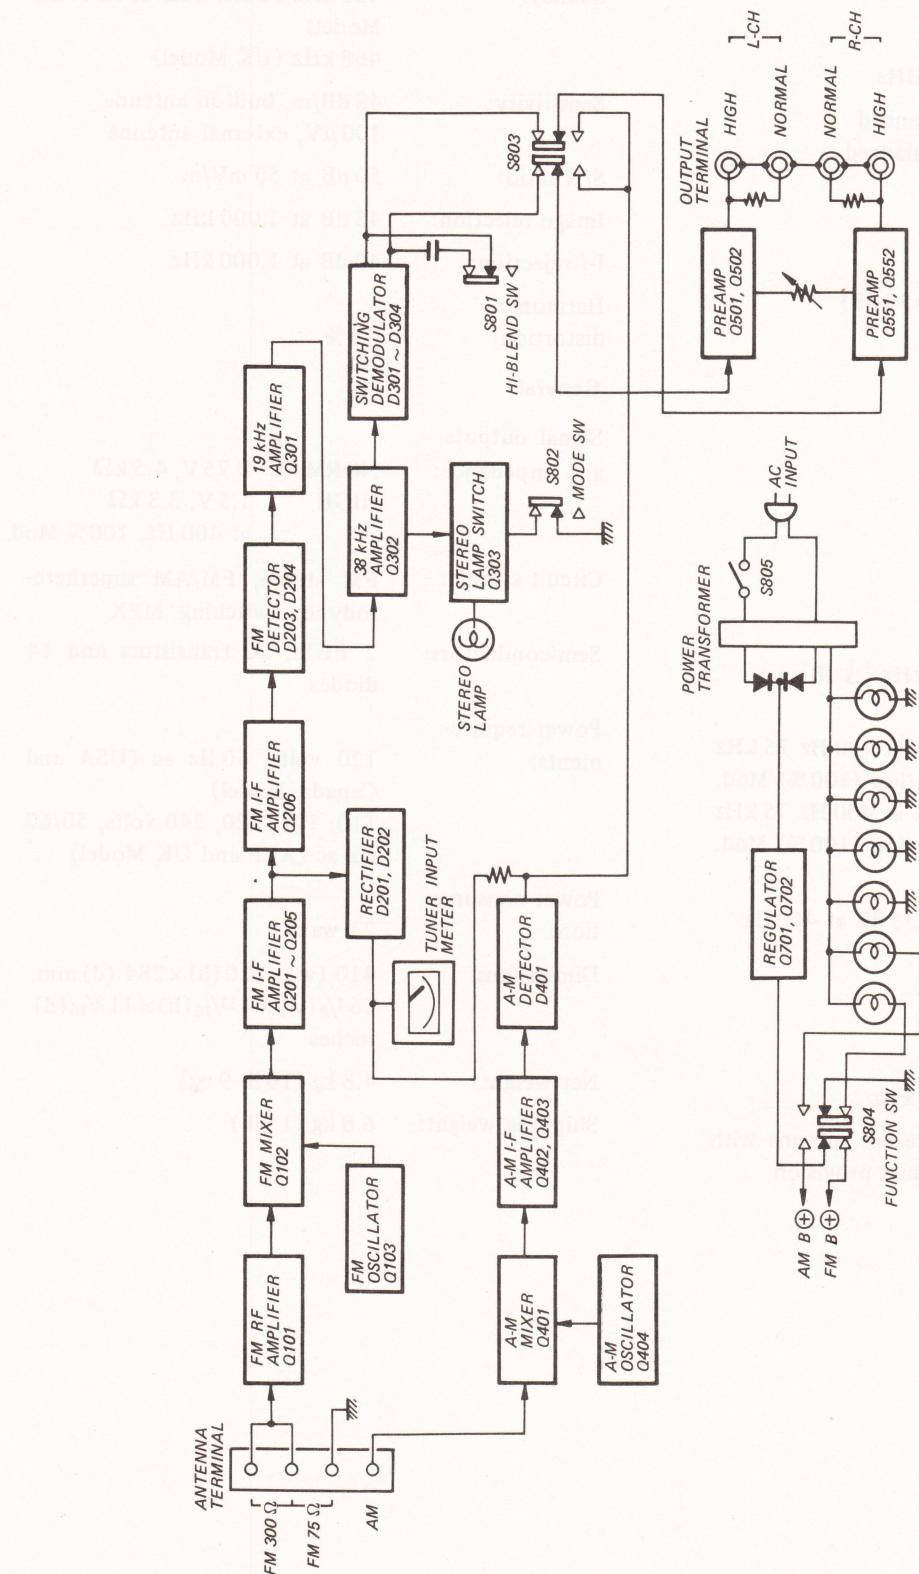

##### A-m Tuner Section

Tuning range:	530 to 1,605 kHz
Antenna:	Built-in ferrite bar antenna with external antenna provision

Intermediate frequency:	455 kHz (USA, Canada and AEP Model) 468 kHz (UK Model)
Sensitivity:	48 dB/m, built-in antenna 100 $\mu$ V, external antenna
S/N ratio:	50 dB at 50 mV/m
Image rejection:	45 dB at 1,000 kHz
I-f rejection:	40 dB at 1,000 kHz
Harmonic distortion:	0.6 %
<b>General</b>	
Signal outputs and impedance:	NORMAL 0.75 V, 4.5 k $\Omega$ HIGH 1.5 V, 3.3 k $\Omega$ at 400 Hz, 100 % Mod.
Circuit system:	FM stereo, FM/AM superheterodyne, switching MPX
Semiconductors:	2 FETs, 20 transistors and 14 diodes
Power requirements:	120 volts, 60 Hz ac (USA and Canada Model) 110, 127, 220, 240 volts, 50/60 Hz ac (AEP and UK Model)
Power consumption:	23 watts
Dimensions:	410 (w) $\times$ 120 (h) $\times$ 284 (d) mm 16 $\frac{1}{8}$ (w) $\times$ 4 $\frac{11}{16}$ (h) $\times$ 11 $\frac{3}{16}$ (d) inches
Net weight:	4.8 kg (10 lb 9 oz)
Shipping weight:	6.8 kg (15 lb)

SECTION I  
TECHNICAL DESCRIPTION

## 1-2. BLOCK DIAGRAM

## SECTION 2

### DISASSEMBLY AND REPLACEMENT

**Note:** All screws in this service manual are Phillips type (cross recess type) unless otherwise indicated.

#### 2-1. FRONT PANEL REMOVAL

1. Remove the two screws at both sides of the wooden case. This frees the wooden case.
2. Remove the TUNING knob by pulling it straight off.
3. Remove the two screws from the bottom plate and one screw at both sides of the front subchassis as shown in Fig. 2-1 and 2-2. This frees the front panel.

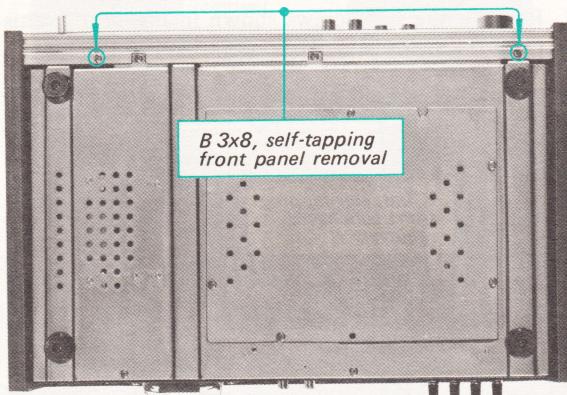

Fig. 2-1. Front panel removal (bottom view)

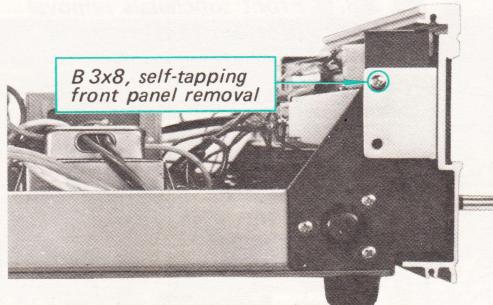

Fig. 2-2. Front panel removal (side view)

#### 2-2. LAMP REMOVAL

##### Dial Lamp

1. Remove the screw shown in Fig. 2-3. This frees the dial lamp holder.
2. Remove the lamp from the holder.

##### Meter Lamp

1. Straighten the flat spring, then pull it up as shown in Fig. 2-4. This frees the meter lamp holder.
2. Remove the lamp from the holder.

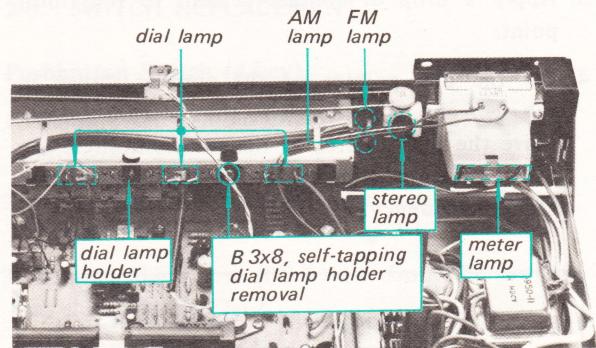

Fig. 2-3. Dial lamp replacement

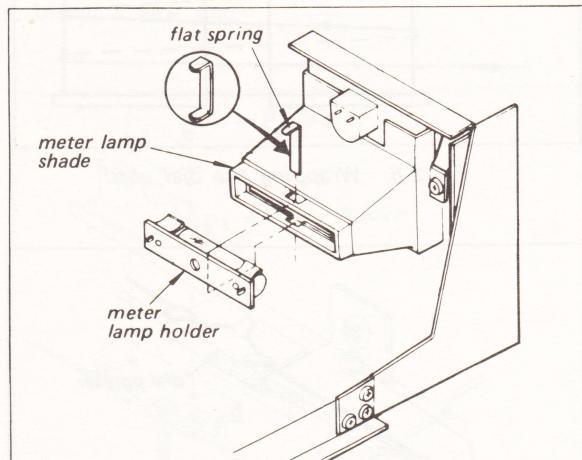

Fig. 2-4. Meter lamp removal

#### 2-3. DIAL CORD STRINGING

##### Preparation

1. Cut a 1250 mm (51-inch) length of 0.5 mm (1/64-inch) diameter dial cord.
2. Tie the end of the cord to a spring as shown in Fig. 2-5.
3. Rotate the tuning drum fully clockwise (maximum capacitance position).
4. Hook the spring to the tuning drum as shown in Fig. 2-5.

##### Procedure

1. Referring to Fig. 2-5, proceed the stringing in numerical order as shown.

**Note:** Refer to the Fig. 2-6, for wrapping the cord around the drum.

At the finish point of stringing, tighten the cord so that the spring is under tension, and squeeze the eylet.

2. After completing the dial cord stringing, make sure that the tuning system works properly.

3. Apply a drop of contact cement to the finish point.

4. Put the dial pointer on the cord as shown in Fig. 2-7, and tune the set to the local fm station. Move the dial pointer to the position where the dial indication coincides with the local station carrier frequency.

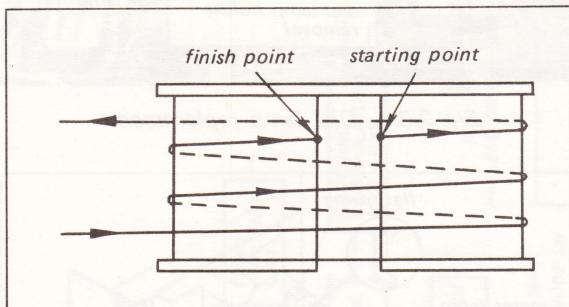

Fig 2-6. Wrapping the dial cord

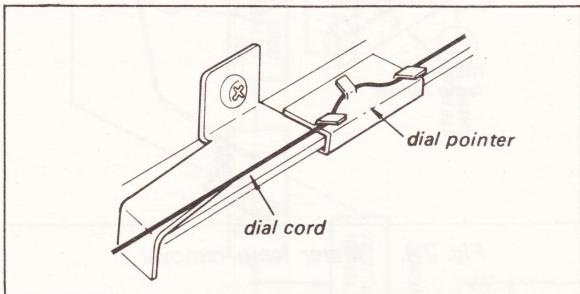

Fig 2-7. Dial pointer installation

## 2-4. FRONT SUBCHASSIS REMOVAL

### Preparation

1. Fix the dial cord to the drum and the five pulleys by using a cellophane tape.

2. Remove the tuning drum by removing the set screw.

3. Remove the front panel as described in Procedure 2-1.

### Procedure

1. Remove the two screws from the front bottom of the chassis as shown in Fig. 2-8.

2. Remove the three screws at both sides of the chassis as shown in Fig. 2-9.

3. Remove the two screws shown in Fig. 2-10. This frees the front subchassis with dial cord.

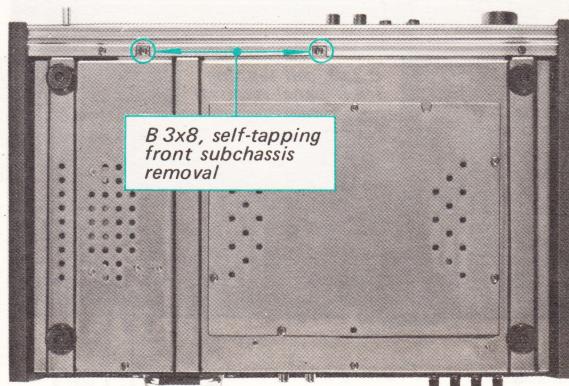

Fig. 2-8. Front subchassis removal  
(Bottom view)

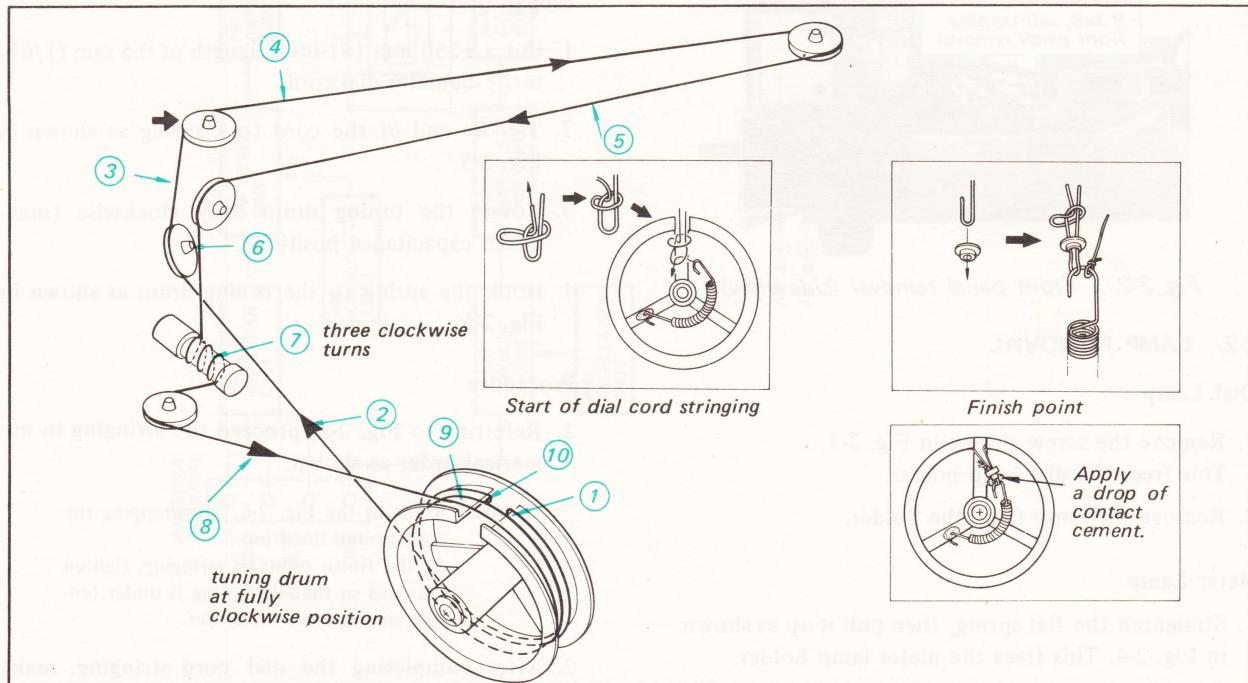

Fig. 2-5. Dial cord stringing

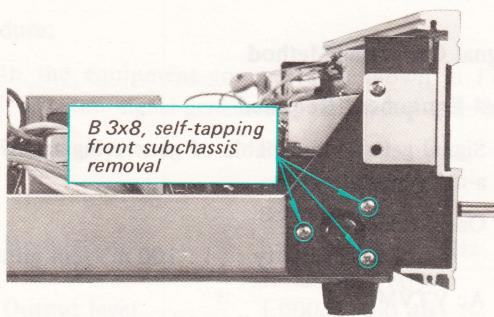

Fig. 2-9. Front subchassis removal  
(Side view)

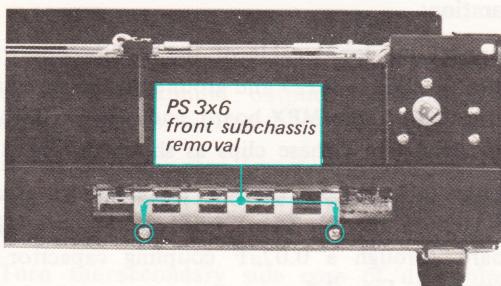

Fig. 2-10. Front subchassis removal

## 2-5. PRINTED CIRCUIT BOARD REMOVAL

1. Remove the front subchassis as described in Procedure 2-4.
2. Remove the four screws shown in Fig. 2-11. This frees the printed circuit board.

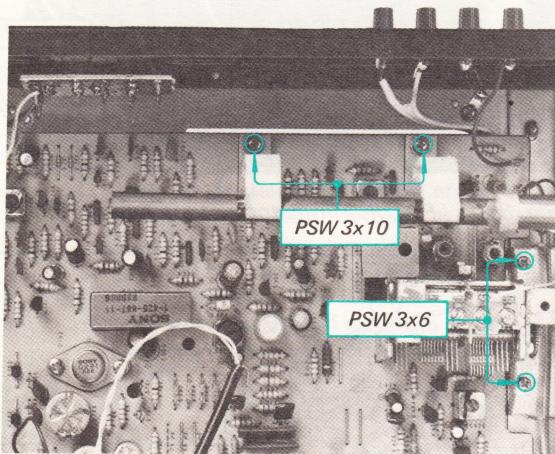

Fig. 2-11. Printed circuit board removal

## 2-6. SWITCH REPLACEMENT

### Pushbutton Switch (4-key)

1. Remove the printed circuit board as described in Procedure 2-5.
2. Remove the switch bracket by removing the two screws (P 2.6 x 4) shown in Fig. 2-12.
3. Remove the screw (P 2.6 x 14) from the bottom as shown in Fig. 2-12.
4. With a soldering iron having a solder sucking tip, clean the solder from each lug of the switch.
5. Install a new one.

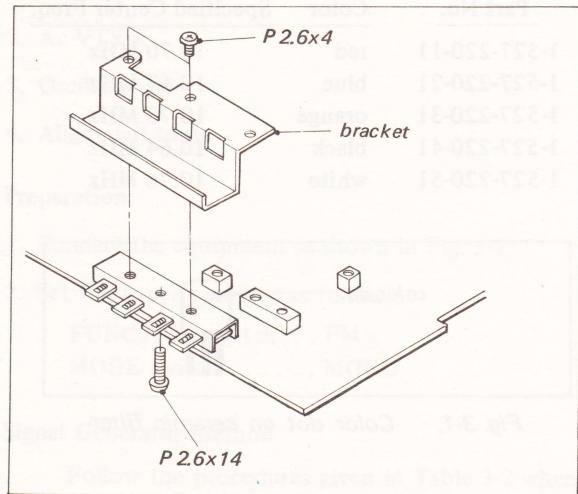

Fig. 2-12. 4-key pushbutton switch replacement

## SECTION 3

### ALIGNMENT AND ADJUSTMENT

#### 3-1. FM I-F AND DISCRIMINATOR ALIGNMENT

##### CAUTION

The ceramic filters in the fm i-f circuit are selected according to their specified center frequencies and color coded as shown in Fig. 3-1 and listed in Table 3-1. Check the color code of the filters to identify the same center frequency when replacing any of these filters.

**TABLE 3-1.**  
**FM I-F CERAMIC FILTERS**

Part No.	Color	Specified Center Freq.
1-527-220-11	red	10.70 MHz
1-527-220-21	blue	10.67 MHz
1-527-220-31	orange	10.73 MHz
1-527-220-41	black	10.64 MHz
1-527-220-51	white	10.76 MHz

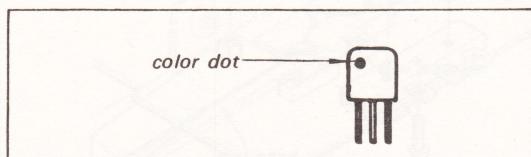

Fig. 3-1. Color dot on ceramic filter

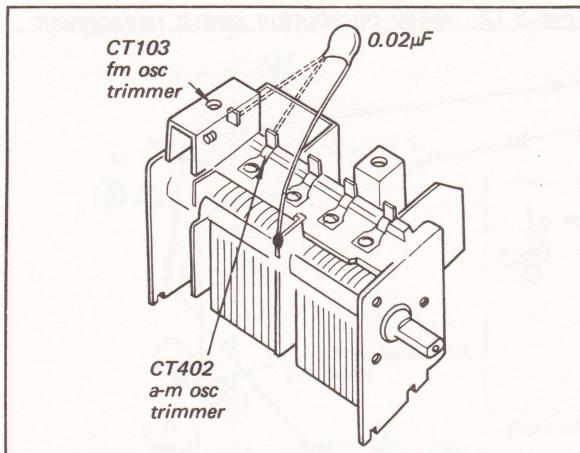

Fig. 3-2. Interruption of fm or a-m local oscillator operation

**Note:** Local oscillator should be killed when performing this alignment. To stop the local oscillator operation, shunt the oscillator capacitor with a  $0.02\mu F$  capacitor as shown in Fig. 3-2.

##### Signal Generator Method

##### Test Equipment Required

1. Signal generator capable of generating a 10.7 MHz a-m/fm signal.
2. Oscilloscope  
Vertical sensitivity . . . . 100 mV/cm minimum
3. Ac VTVM
4. Alignment tools

##### Preparation:

1. Connect the input cable of the oscilloscope with alligator clips to R227 and ground on the fm (a-m) front-end/i-f amp/MPX board, and solder a  $0.02\mu F$  capacitor across these clips as shown in Fig. 3-3.
2. Connect the output cable of the generator across CV102 on the fm (a-m) front-end/i-f amp/MPX board through a  $0.02\mu F$  coupling capacitor as shown in Fig. 3-4.

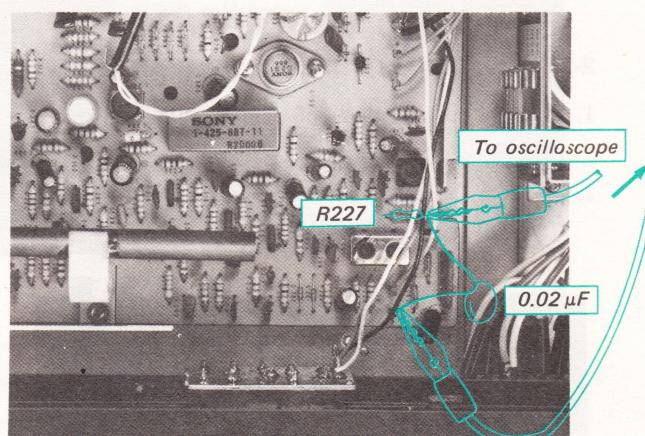

Fig. 3-3. Fm discriminator output connection

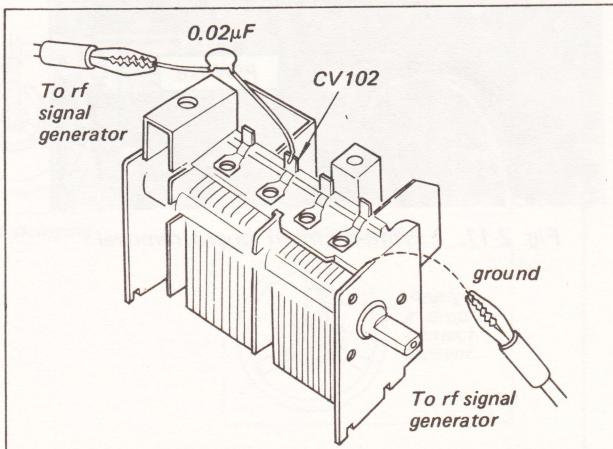

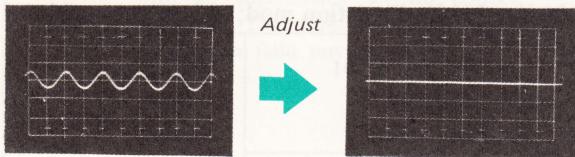

Fig. 3-4. 10.7MHz signal injection

**Procedure:**

- With the equipment connected as shown in Fig. 3-5, set the signal-generator controls as follows:
 

Frequency . . . . .	Specified frequency of ceramic filter. See Table 3-1.
Modulation . . . . .	Fm, 400 Hz, 75 kHz deviation (100%)
Output level . . . . .	1,000 $\mu$ V (60 dB)
- Set the tuner switches as follows:
 

FUNCTION switch . . . . .	FM
MODE switch . . . . .	MONO
- Adjust the signal generator frequency slightly to obtain a maximum output, then change the signal generator modulation to a-m, 400Hz 30%.
- If the discriminator transformer IFT201 is not aligned correctly, 400 Hz ripple will be observed as shown in Fig. 3-6.
- Turn the secondary side core of discriminator transformer IFT201 (see Fig. 3-10) to obtain a minimum indication on the oscilloscope with an alignment tool as shown in Fig. 3-6.

*Fig. 3-6. Fm discriminator alignment output response*

**Note:** Turn the core carefully and slowly because the output appearing on the oscilloscope jumps up and down when turning the core. This might cause difficulty in determining the point of minimum output. Also, at both extreme positions of the top core, decreased output will be observed. The real null point should be obtained in the middle of the core thread length, and maximum output appears at each side of the true null point.

- Change the signal generator modulation to fm, 400 Hz, 75 kHz deviation (100%).
- Turn the core of fm IFT101 and the primary side core of discriminator transformer IFT201 (see Fig. 3-10) to obtain the maximum output.

### 3-2. FM FREQUENCY COVERAGE AND TRACKING ALIGNMENT

**Note:** Before starting this alignment, the fm i-f and discriminator alignment should be performed.

#### Test Equipment Required

- Fm signal generator
- Ac VTVM
- Oscilloscope
- Alignment tools

#### Preparation:

- Connect the equipment as shown in Fig. 3-7.
- Set the tuner switches as follows:
 

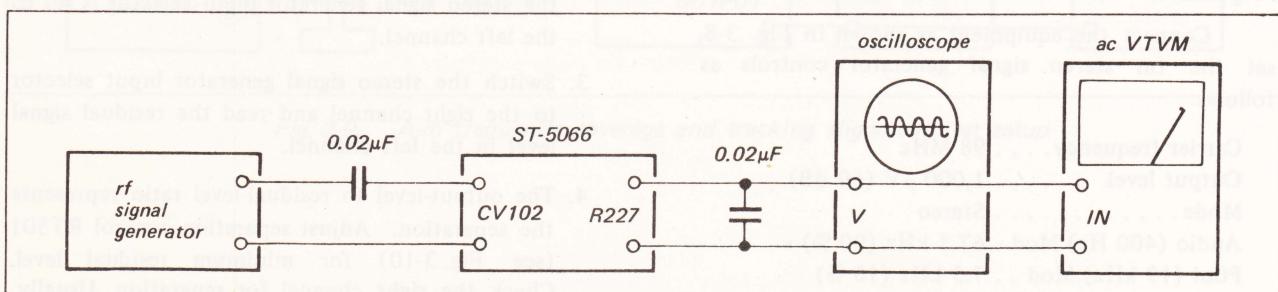

FUNCTION switch . . . . .	FM
MODE switch . . . . .	MONO

#### Signal Generator Method

Follow the procedures given in Table 3-2 when performing this alignment with an fm signal generator. Be sure that the dial is mechanically calibrated.

#### Off-the-Air Signal Method

Frequency coverage and tracking alignment can also be performed by utilizing off-the-air local fm signals. However, before performing the alignment, be sure that the dial is mechanically calibrated.

*Fig. 3-5. Fm i-f and discriminator alignment test setup by rf signal generator*

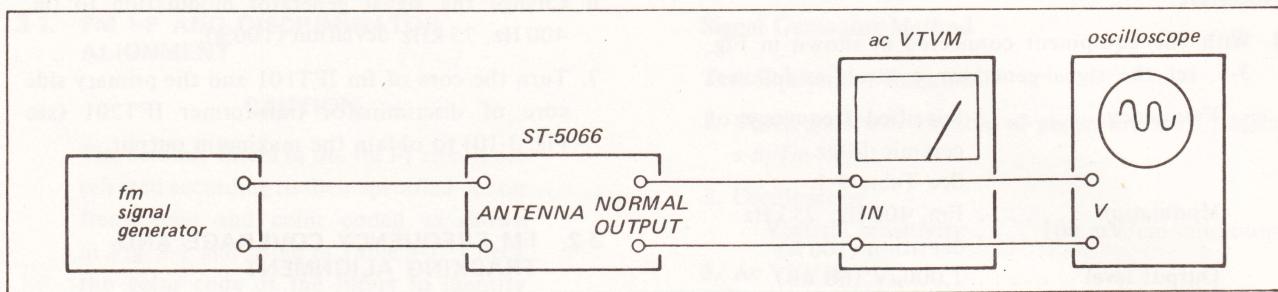

Fig. 3-7. Fm frequency coverage and tracking alignment test setup

TABLE 3-2. FM FREQUENCY COVERAGE AND TRACKING ALIGNMENT

FREQUENCY COVERAGE ALIGNMENT		SG Coupling ..... Direct SG Output Level ..... 400 Hz, 75 kHz Deviation mod; as low as possible			
Step	SG Frequency	Dial Setting	Ac VTVM Connection	Adjust	Indication
1	87.5 MHz	lowest position	NORMAL OUTPUT	OSC coil L103 See Fig. 3-10.	Maximum VTVM reading
2	108 MHz	108 MHz		OSC trimmer CT103 See Fig. 3-10.	
TRACKING ALIGNMENT		SG Coupling ..... Direct SG Output Level ..... 400 Hz, 75 kHz Deviation mod; as low as possible			
1	87.5 MHz	Tune to the SG signal	NORMAL OUTPUT	Antenna coil L101 RF coil L102 See Fig. 3-10.	Maximum VTVM reading
2	108 MHz			Antenna trimmer CT101 RF trimmer CT102 See Fig. 3-10.	

### 3-3. FM STEREO SEPARATION ADJUSTMENT

#### Test Equipment Required

1. Fm stereo signal generator
2. Ac VTVM
3. Oscilloscope

#### Preparation:

Connect the equipment as shown in Fig. 3-8, set the fm stereo signal generator controls as follows:

Carrier frequency . . . 98 MHz  
 Output level . . . . . 1,000  $\mu$ V (60 dB)  
 Mode . . . . . Stereo  
 Audio (400 Hz) Mod .. 67.5 kHz (90 %) \*  
 Pilot (19 kHz) Mod . . 7.5 kHz (10 %)

\* Note: 75 kHz (100%) if the metering indicates total modulation (audio-pilot).

#### Procedure:

1. Precisely tune the tuner to the carrier frequency of stereo signal generator, then turn the top core of switching transformer L301 (see Fig. 3-10) to obtain maximum output at the left channel. Note that this adjustment has a close relationship with stereo distortion.
2. Record the output level of the left channel when the stereo signal generator input selector is set to the left channel.
3. Switch the stereo signal generator input selector to the right channel and read the residual signal level in the left channel.
4. The output-level to residual-level ratio represents the separation. Adjust separation control RT501 (see Fig. 3-10) for minimum residual level. Check the right channel for separation. Usually, about an 8 to 9 dB difference in channel separation exists. Readjust RT501 for minimum difference

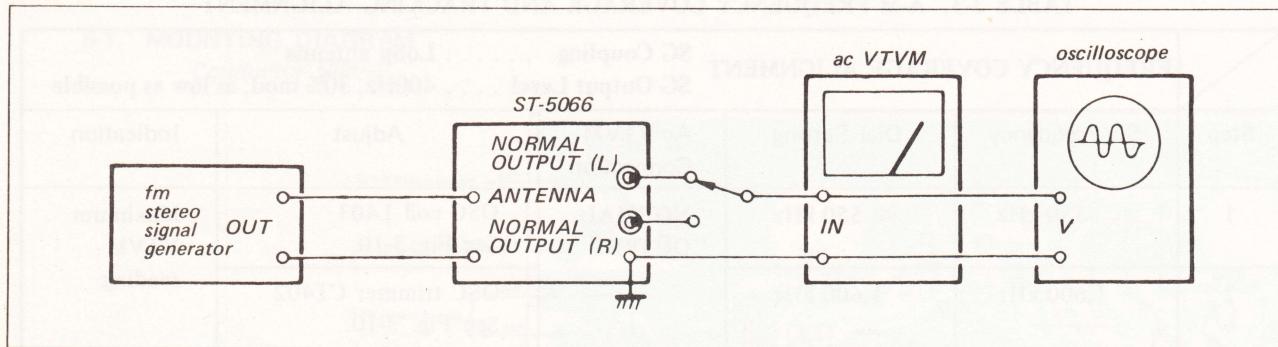

Fig. 3-8. Fm stereo separation adjustment test setup

between left- and right-channel separation. While doing this, remember that the output level also changes according to the setting of RT501.

#### 3-4. A-M I-F STRIP ALIGNMENT

**Note:** The a-m i-f transformers (CFT401 and IFT401) are shipped from the factory with all adjustments set for correct operation. Therefore no adjustment is required in field service.

#### 3-5. A-M FREQUENCY COVERAGE AND TRACKING ALIGNMENT

##### Preparation:

Set the FUNCTION switch to AM.

##### Signal Generator Method

##### Test Equipment Required

1. Signal generator
2. Loop antenna
3. Ac VTVM or oscilloscope

##### Procedure:

With the equipment connected as shown in Fig. 3-9, follow the procedures given in Table 3-3 when performing this alignment with an a-m signal generator. Be sure that the dial is mechanically calibrated.

##### Off-the-Air Signal Method

Frequency coverage and tracking alignment can also be performed by utilizing off-the-air local a-m signals. However, before performing the alignment, be sure that the dial is mechanically calibrated.

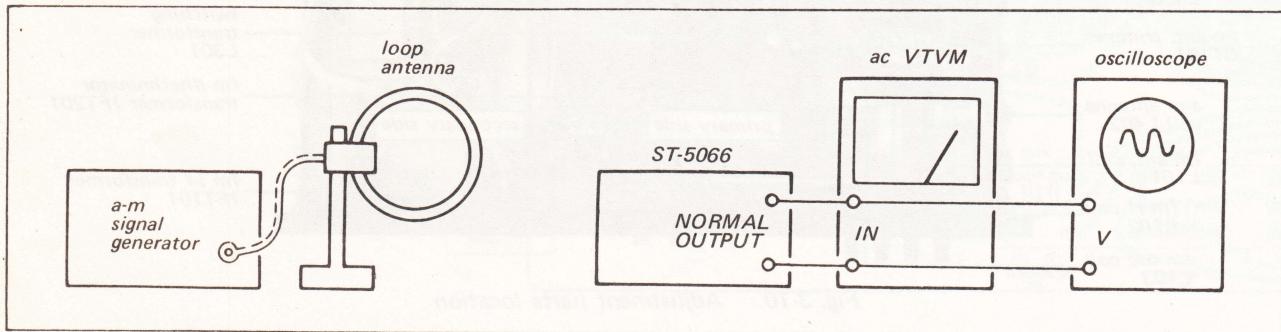

Fig. 3-9. A-m frequency coverage and tracking alignment test setup

TABLE 3-3. A-M FREQUENCY COVERAGE AND TRACKING ALIGNMENT

FREQUENCY COVERAGE ALIGNMENT			SG Coupling . . . . Loop antenna SG Output Level . . . 400Hz, 30% mod; as low as possible		
Step	SG Frequency	Dial Setting	Ac VTVM Connection	Adjust	Indication
1	550 kHz	550 kHz	NORMAL OUTPUT	OSC coil L403 See Fig. 3-10.	Maximum VTVM reading
2	1,600 kHz	1,600 kHz		OSC trimmer CT402 See Fig. 3-10.	
TRACKING ALIGNMENT			SG Coupling . . . . Loop antenna SG Output Level . . . 400Hz, 30% mod; as low as possible		
1	600 kHz	Tune to the SG signal.	NORMAL OUTPUT	Position of bar antenna L402. See Fig. 3-10.	Maximum VTVM reading
2	1,400 kHz			Antenna trimmer CT401 See Fig. 3-10.	

## Adjustment Parts Location:

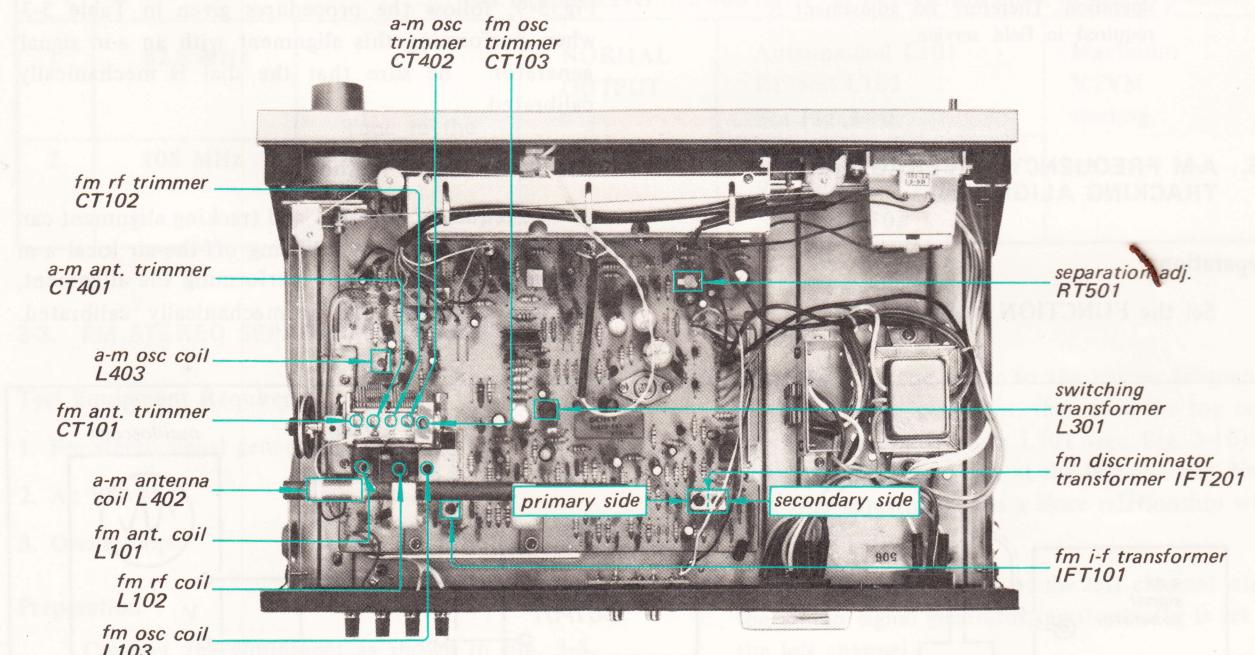

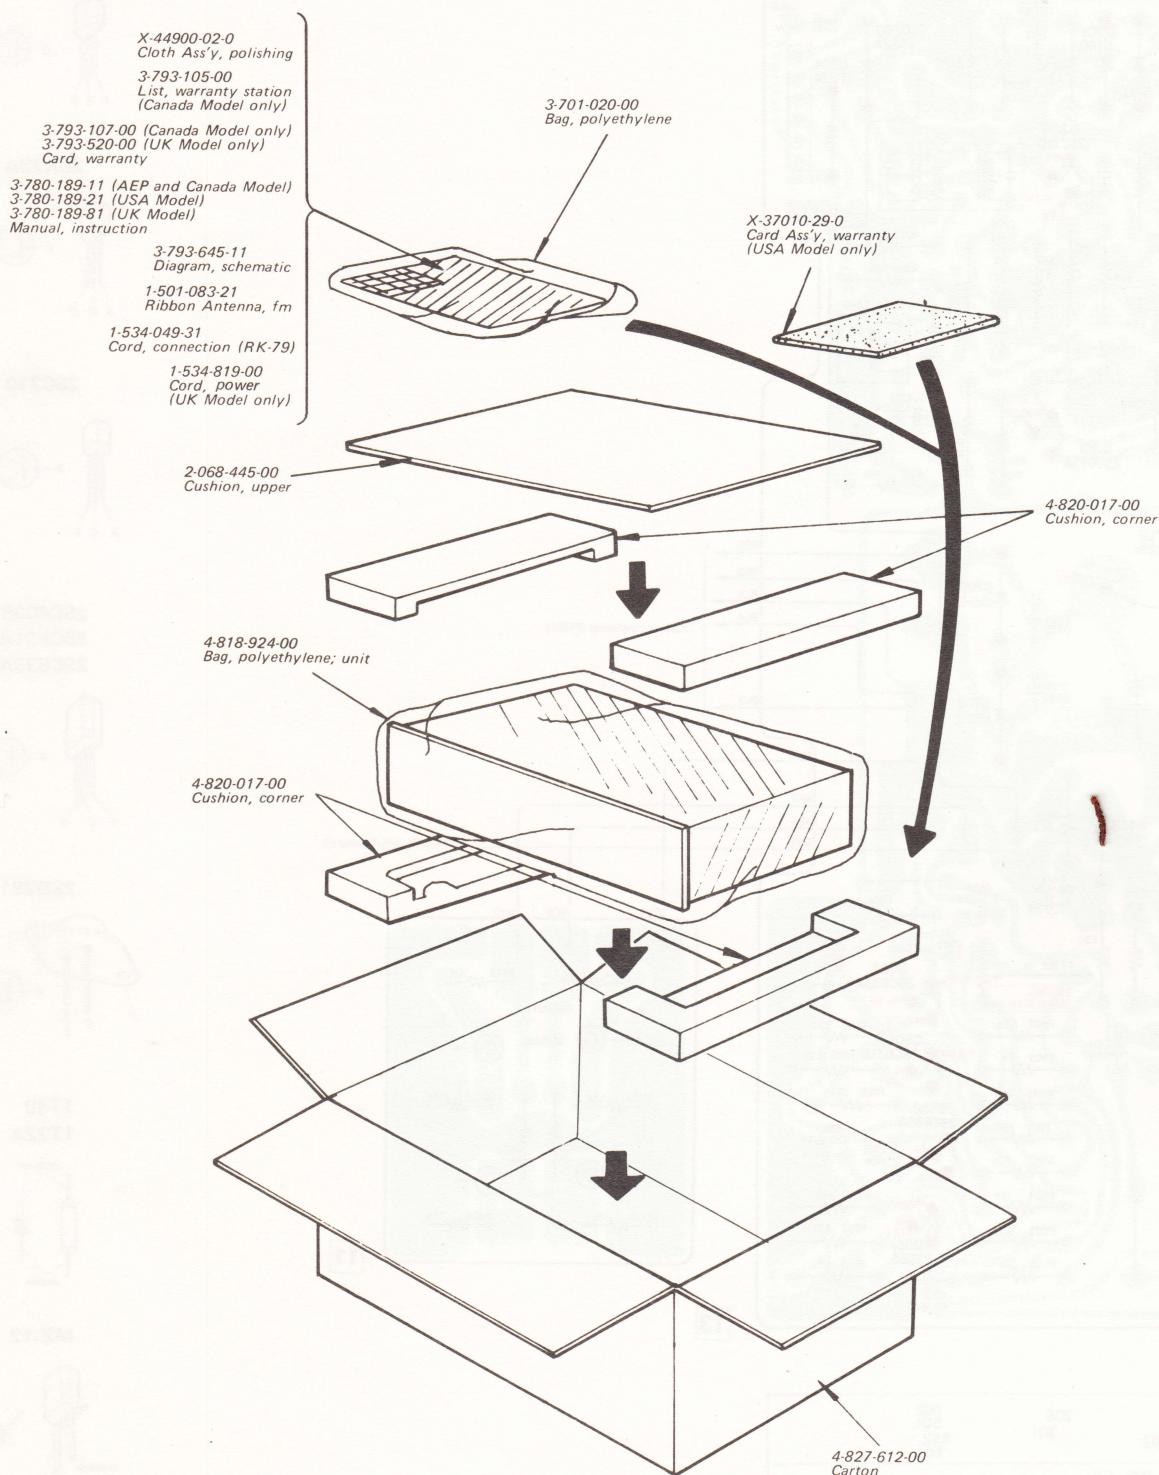

Fig. 3-10. Adjustment parts location

## SECTION 4 REPACKING

The ST-5066's original shipping carton and packing materials are the ideal containers for shipping the unit. However to secure the maximum protection,

the ST-5066 must be repacked in these materials precisely as before. The proper repacking procedures are shown in Fig. 4-1.

**Note:** Applicable Serial Numbers:

- USA Model (Serial No. 800,001 and later)
- Canada Model (Serial No. 700,001 and later)
- UK Model (Serial No. 600,001 and later)
- AEP Model (Serial No. 500,001 and later)
